

Healthy schools, healthy students

Case study

Made by: Tiszadob Nagyközség Roma Nemzetiségi Önkormányzata

Az egész életen
át tartó tanulás
programja

This case study was made from the evaluated datas of surveys filled in by student, teachers and parents in 6 schools.

Data:

Category	Number of questionnaires given out	Number of questionnaires returned	Cannot be evaluated	Evaluated
Pupil	1300	1068	26	1042
Parent	1120	803	8	795
Teacher	200	140	0	140

- The persons involved participated in the measurement/opinion-giving voluntarily.
- The interest to the topic varied, and the questionnaires were completed accordingly.
- It can also be seen who took it seriously that their opinion is important to the interviewer.
- Questionnaires where the same answer was given to each question (“agreeing with everything” or “disagreeing with everything” or “not knowing”) do not seem to suggest careful and responsible respondents. These persons comprise 10% of the respondents.
- However, the majority provided well-thought answers in the three relevant rounds (pupil, parent, teacher).
- Some of the parents also commented on some questions.
- These careful answers have provided a clear overview of the regional schools and a good basis for future work and elaboration of the training material.

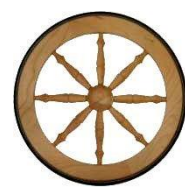

Questions of the questionnaires

1. I think schools are safe places.
2. I think the schools pay attention to cleanliness.
3. I think schools give importance to traffic safety before and after classes.
4. I think fire alarms work and useful in schools.
5. I think security cams are necessary in schools.
6. I think duty students, teachers are useful for school safety.
(Duty Students, teachers means once a week they have responsibility to take care school or corridor.)
7. I think school canteens and restaurants are hygienic and carries no risk for students.
8. I think school canteens and restaurants are hygienic and carries no risk for students.
9. I think school buses are safe for students.
10. I think school playgrounds are safe.
11. I think the staff in the school has necessary knowledge about first aid.
12. I think school takes necessary measures to prevent violence against students.
13. I believe that school makes necessary study for student who are exposed to violence at home.
14. I think school has taken necessary safety precautions in school laboratories.
15. I think schools inform about overweight and obese in schools.
16. I think schools make studies about the importance of breakfast to students and their parents.
17. I think studies for healthy eating habits should be made for students and their parents.
18. I think studies should be done to develop self care skills of students.

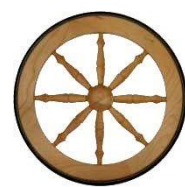

Number of answers for the questions given by parents

Nr. of question	I totally disagree	I disagree	I have no idea	I agree	I totally agree
1.	42	186	85	300	87
2.	15	84	65	354	183
3.	56	141	147	257	100
4.	7	14	146	290	256
